Vaccines protect against 5 diseases globally.

Hib kills more than 3,700,000 children under 5 every year.

Nearly 20% of these children die in India.

**Vaccines**

- Meningitis
- Pneumonia
- Septicemia
- Septic Arthritis

Vaccine can prevent over a third of pneumonia cases and 90% of Hib meningitis cases.

**Advantages**

- Fully liquid formulation in convenient combo pack for reducing contaminations & handling errors.
- Peel-off stickers to provide accuracy in recording vaccine-related information.
- 100% cold chain maintained delivery (CCMD).
- Optimal aluminium salt adjuvant for long-term persistent protection.
- Assured safety and high immunogenicity.
- Flexibility with different dosing schedules.
- Approved for EPI Programme.

**Composition**

Each single dose of 0.5 mL contains:

- Diphtheria toxoid: ≥ 30 IU (≥ 20 Lf to ≤ 30 Lf)
- Tetanus toxoid: ≥ 60 IU (≥ 5 Lf to ≤ 25 Lf)
- Inactivated whole cell Bordetella pertussis: ≥ 4 IU
- Hepatitis B surface antigen (rDNA): ≥ 10 μg
- Hib polysaccharide covalently bound to TT (PRP-TT): ≥ 10 μg
- Al+++ content (as AlPO4 gel): ≤ 1.25 mg
- Thiomersal (as preservative): ≤ 0.01% w/v
- Normal saline (Sodium Chloride 0.9%): q.s.
